Maths Review – Unit 2 (2D Shape & Pattern) + Unit 6 (3D Shapes)

Hải Phong · 4B3 · Tổng hợp từ LMS tuần 12–13 (02/11 – 13/11) · Name: _____ Date: _____

Phụ huynh: Unit 2 và Unit 6 chưa có đề ôn trên LMS nên đây là phiếu tổng hợp từ poster, slide và bài tập tuần 12–13. Đáp án ở trang cuối.

1. 2D shapes, lines and symmetry

Triangle	Sides	Angles	Lines of symmetry
Equilateral	3 equal sides	3 equal angles	3
Isosceles	2 equal sides	2 equal angles	1
Scalene	no equal sides	no equal angles	0
Right-angled	has one right angle (90°) – can also be isosceles or scalene		

Horizontal line: goes left ↔ right (like the horizon). **Vertical** line: goes up ↕ down (like a tall tree).
Symmetry: a shape can be folded into two matching halves along a **line of symmetry**.
Reflect: flip a shape across a mirror line. The image is the same size and shape, the same distance from the mirror line, but faces the opposite way.

2. 3D shapes – faces, edges, vertices

3D shape	Faces / surfaces	Edges	Vertices	Type
Cube	6 square faces	12	8	prism
Cuboid	6 rectangular faces	12	8	prism
Triangular prism	5 (2 triangles, 3 rectangles)	9	6	prism
Square-based pyramid	5 (1 square, 4 triangles)	8	5	pyramid
Triangular pyramid (tetrahedron)	4 triangles	6	4	pyramid
Cylinder	2 flat circles + 1 curved surface	2	0	not a prism
Cone	1 flat circle + 1 curved surface	1	1 (apex)	–
Sphere	1 curved surface	0	0	–

Face = flat surface · **Edge** = where two faces meet · **Vertex** (plural **vertices**) = corner where edges meet.
A **prism** has the same shape all the way through and flat faces only. A **pyramid** has a base and triangular faces meeting at one point.

Pyramids always have the same number of faces as vertices. A **net** is a flat shape that folds up to make a 3D shape (a cube has 11 different nets).

3. Practice

A. Name the triangle

1. All three sides are 5 cm. _____
2. Sides are 4 cm, 6 cm and 7 cm. _____
3. Two sides are 8 cm, one side is 5 cm. _____
4. How many lines of symmetry does an isosceles triangle have? _____

B. Lines and symmetry

5. Write H (horizontal) or V (vertical): the edge of a table top _____; a flagpole _____.
6. How many lines of symmetry does a square have? _____ A rectangle? _____
7. Which capital letters have a vertical line of symmetry? Circle: A B F H M T R
8. On squared paper, draw a right-angled triangle and reflect it in a vertical mirror line. Explain how you checked.

C. 3D shapes

9. I have 6 faces, all squares. What am I? _____
10. I have 5 faces and 5 vertices. What am I? _____
11. Name two shapes with a curved surface. _____
12. True or false: A cylinder is a prism. _____ Why? _____
13. True or false: A triangular prism has 6 vertices. _____
14. How many edges does a cuboid have? _____
15. Arnold says "Every pyramid has the same number of faces as vertices." Check with a triangular pyramid and a pentagonal pyramid. Is he right? _____
16. Which shape is the odd one out: cube, cuboid, triangular prism, cylinder? Explain. _____

Answer key

1 equilateral · 2 scalene · 3 isosceles · 4 one

5 table top edge = H; flagpole = V · 6 square 4, rectangle 2 · 7 A, H, M, T (B has a horizontal line, F and R have none) · 8 teacher/parent checks: each corner is the same number of squares from the mirror line on the other side

9 cube · 10 square-based pyramid · 11 e.g. cylinder, cone (sphere) · 12 False – a cylinder has a curved surface, prisms have only flat faces · 13 True · 14 12 · 15 Yes: triangular pyramid 4 faces/4 vertices; pentagonal pyramid 6 faces/6 vertices · 16 e.g. cylinder – it has a curved surface and no vertices (other answers possible if explained)
